

Level 2 Orientation Guide

Wave 11 | Welcome & Everything You Need to Know

This guide contains:

- [+] Important information
- [+] Helpful resources
- [+] Expectations
- [+] Homework information
- [+] Useful links
- [+] Discord channels
- [+] Tools & setup

Bookmark or save this guide so you can come back to it whenever needed.

Welcome + Congratulations

Congratulations on making it to Level 2! This is where projects begin feeling much more real-world and practical. You'll start thinking more like developers rather than only following tutorials step-by-step.

At this stage:

- Less copy/paste
- More problem solving
- More debugging
- More experimentation
- More independent thinking

Making mistakes is completely normal and expected. Even professional developers constantly debug, Google things, read documentation, and research solutions.

Common Questions

How long is Level 2?

Approximately 1 month + 2 weeks, depending on how fast/slow we move as a class.

When is the next Level 3 reset?

This depends on when the current Level 3 class finishes. A concrete date will be given once known.

Are live classes recorded?

Yes. All live classes are recorded and uploaded to: lvl-2-wave-11-class-recordings. If you cannot access the channel, let me know. If you cannot attend live: let me know, watch the recordings, and stay caught up with homework/projects.

What if I feel behind?

DM me. We can do a 1-on-1 session to help catch you up.

What if I am ahead and want to move faster?

DM me. We can discuss putting you on a faster track toward finishing Level 2.

Will there be homework?

Yes. Homework submissions go to: lvl-2-homework-or-exercise-subm. Homework does NOT have strict deadlines, but all homework must be completed before moving to Level 3.

What are QA Sessions?

QA Sessions are optional support sessions where you can ask questions about previous classes, coding questions, debugging help, project concerns, and any coding-related confusion.

>> QA sessions happen once a week

>> Date/time can be found in the Discord Event Tab

Level 2 Prerequisites

Before starting Level 2, please make sure you have:

[+] A GitHub account

[+] VSCode (or another IDE/editor installed)

Repository Setup

Please create your own repository for Level 2 Wave 11. This will help you organize projects, store homework/exercises, keep all Level 2 work together, and extract topics from the mentor repository.

What Level 2 Focuses On

In Level 2 we focus on building real applications using JavaScript fundamentals. Topics include:

- DOM manipulation
- Event listeners
- Responsive UI design
- Project structure
- APIs using fetch / async-await / Axios
- localStorage
- Debugging & problem solving
- Preparing for React + modern frontend development
- Passing Props & Destructuring

Final Project Expectations

We'll review the Final Project README.md together. Projects should demonstrate:

- [+] HTML understanding**
- [+] CSS styling**
- [+] JavaScript logic**
- [+] Responsiveness**
- [+] DOM manipulation**
- [+] Event listeners**
- [+] API usage**
- [+] localStorage**
- [+] Good UI/UX**
- [+] Clean organization & structure**

How Classes Will Work

- Live classes
- Discord communication
- Homework/projects
- QA sessions
- Code reviews
- Personal project sharing

>> Class dates/times are found in the Discord Event Tab.

Important Reminders & Rules

Reminders

- I WANT questions
- Struggling is normal
- Googling/documentation is normal
- Debugging is part of coding
- Nobody memorizes everything
- Participation + consistency matter

Rules & Expectations

[x] Do NOT AI copy-paste code without understanding it

[+] Practice outside class consistently

[+] Push projects to GitHub

[+] Stay active and communicate

[+] Learn through mistakes

Required Tools

VSCode

Main code editor used for projects.

Link: <https://code.visualstudio.com/>

Git

Tracks code changes and version control.

Link: <https://git-scm.com/downloads>

GitHub

Used to store, share, and deploy projects.

Link: <https://github.com/>

Node.js (needed in Level 3)

Allows JavaScript tools/packages to run outside the browser.

Link: <https://nodejs.org/en>

Recommended VSCode Extensions

Live Server

Auto-refreshes your browser while coding.

Prettier

Automatically formats your code.

Auto Rename Tag

Renames matching HTML tags automatically.

Error Lens

Shows coding errors directly in VSCode.

ES7 React Snippets

Helpful React shortcuts and snippets.

Bracket Pair Colorizer

Color codes brackets to improve readability.

Important Discord Channels

Announcements

Latest important information.

>> Channel: #announcements

Wins

Share wins and progress with the community.

>> Channel: #wins

Coding Accountability

Post coding progress and projects.

>> Channel: #coding-accountability

Class Links & Materials

Zoom links and materials posted here.

>> Channel: #class-links-and-material

Homework & Exercise Submissions

Homework submissions + feedback.

>> Channel: #lvl-2-homework-or-exercise-subm

Level 2 Class Recordings

Watch and review previous live classes.

>> Channel: #lvl-2-coaching-call-videos

Final Projects

Post your final project repo + description.

>> Channel: #lvl-2-final-projects
